PROJECTS

Price mania: created a website which displays the price of a electronic product from different site like Amazon, Tatacliq, and Flipkart. It was built on python(flask) and designed using HTML5 and CSS3. We used python's Beautiful soup library to scrape through the content from pricetree.com.

Online Paper presentation: built this as a minor project from college. The idea was to built a system for where any organization can register for a conference and people can register for participation in those conferences by submitting small details about themselves and submitting the document for the topic of the conference. It was built using React.js and Express.js.
